

Vehicle Mounted VMS

Delivering a wide spectrum of signage solutions for the traffic market

Vehicle Mounted VMS

Delivering a wide spectrum of signage solutions for the traffic market

Eurosigns UK Ltd has designed a vehicle mounted sign (VMS) to keep the public and road users informed during traffic maintenance operations.

We have constructed the VMS to provide a quality product with user friendly selection system.

- 1 The programmable control unit is contained within the detachable header unit, which is easily edited via PC / Laptop to change the messages available for the driver to display.
- 2 The user is able to use a count down facility to display the pre-set messages to keep drivers informed of possible delays.
- 3 The VMS has been designed to fit any vehicle, using our aluminium composite. CAD designed for a flexible solution.
- 4 We construct the cases by cutting folds into a single flat plate which allows us to quickly and easily accommodate most shapes and designs.
- 5 The control header unit allows for up to 4 pre-programmed messages to be displayed when required.
- 6 The product has been designed to provide a flexible solution for any vehicle type and application needed.

The vehicle based VMS unit:

- Provides road users with updated information
- Is easily assembled
- Has been designed to be flexible enough to accommodate bespoke requirements
